CATALYTIC ACTIVITY: Release of an N-terminal amino acid, Xaar | - Xbb., in which Xaa is preferably Leu, but may be other amino acids including Pro although not Arg or Lys, and Xbb may be Pro. COFACTOR: Binds 2 manganese ions per subunit (By similarity).

SUBCELLULAR LOCATION: Cytoplasmic (By similarity).

SIMILARITY: Belongs to peptidase family M17.
                                                                                                                                                                                                                                                                                                                                  28-FEB-2003 (Rel. 41, Created)
28-FEB-2003 (Rel. 41, Last sequence update)

--- SUBCELLULAR LOCATION: Cytoplasmic (By similarity).
--- SIMILARITY: Belongs to peptidase family M17.
                                                                                                                                                                                                                                                                                                                                                                                                                                               28-FEB-2003 (Rel. 41, Last sequence update)

-!- CATALYTIC ACTIVITY: Release of an N-terminal amino acid, Xaa-|-Xbb-, in which Xaa is preferably Leu, but may be other amino acids including Pro although not Arg or Lys, and Xbb may be Pro.
-!- COFACTOR: Binds 2 manganese ions per subunit (By similarity).
-!- SUBCELLULAR LOCATION: Cytoplasmic (By similarity).
-!- SUBLIBLY: Belongs to peptidase family M17.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               28-FEB-2003 (Rel. 41, Created)

    similarity).
    CATALVIIC ACTIVITY: Release of an N-terminal amino acid, Xaa-|-Xbb., in which Xaa is preferably Leu, but may be other amino acids including Pro although not Arg or Lys, and Xbb may be Pro.
    COPACTOR: Binds 2 manganese ions per subunit (By similarity).
    SUBCELLULAR LOCATION: Cytoplasmic (By similarity).
    SIMILARITY: Belongs to peptidase family M17.

immunoglobulins and Teal receptors are assembled from variable (V), diversity (D), and joining (J) gene segments. This combinatorial process, known as V(D) Tecombination, allows the generation of an enormous range of binding specificities from a limited amount of genetic information. The RAGI/RAG2 complex initiates this process by binding to the conserved recombination signal sequences (RSS) and introducing a double-strand break between the RSS and introducing a double-strand break conserved in two steps, nicking of one strand (hydrolysis), followed by hairpin formation (transesterification). RAGI/2 has also been shown to function as a transposase in vitro, and to possess RSS-independent endonuclease activity (end processing) and hairpin opening. RAGI alone can bind to RSS but stable, efficient binding requires RAG2. All known catalytic activities require the presence of both proteins (By similarity).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             This SWISS-PROT entry is copyright. Refereration and initial analysis of more than 15,000 full-length

RT "Generation and initial analysis of more than 15,000 full-length

Proc. Natl. Acad. Sci. U.S.A. 99:16899-16903 (2002)

C -1- FUNCTION: Catalyzes a carbon-carbon cleavage reaction; cleaves a

2-hydroxy-3-methylacyl-CoA into formyl-COA and a 2-methyl-branched

Eatty aldehyde (By similarity).

C -1- CARALYIC ACTIVITY: 2-hydroxyphytanoyl-COA and a 2-methyl-branched

Eatty aldehyde (By similarity).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            This SWISS-PROT entry is copyright. -!- PATHWAY: Alpha-oxidation of 3-methyl branched fatty acids (phytamic acid); third step.
-!- SUBUNIT: Homoterramer (By similarity).
-!- SUBCELLULAR LOCATION: Peroxisomal (By similarity).
-!- SIMILARITY: Belongs to the TPP enzyme family.
                                                                                                                                                                                                                                                                                                                                                          "Functional annotation of a full-length mouse cDNA collection."; Nature 409:685-690(2001).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Pfam, PF00205; TPP_enzymes; 1.

Genome Res. 13:1042-1055(2003).

-!- FUNCTION: Has an important function as a repair enzyme for proteins that have been inactivated by oxidation. Catalyzes the reversable oxidation-reduction of methionine sulfoxide in proteins to methionine (By similarity).

-!- CATALYTIC ACTIVITY: Protein L-methionine + oxidized thioredoxin = protein L-methionine S-oxide + reduced thioredoxin.

-!- SIMILARITY: Belongs to the msrA Met sulfoxide reductase family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 SEQUENCE FROM N.A.

CATALYTIC ACTIVITY: Protein L-methionine + oxidized thioredoxin
protein L-methionine S-oxide + reduced thioredoxin.
SIMILARITY: Belongs to the msrA Met sulfoxide reductase family.
                                                                                                                                                                                                                                                            28-FEB-2003 (Rel. 41, Last sequence update)
28-FEB-2003 (Rel. 41, Last annotation update)
Peptide methionine sulfoxide reductase msrA (RC 1.8.4.6) (Proteinmethionine-S-oxide reductase) (Peptide Met(O) reductase).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   SEQUENCE FROW N.A.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         This SWISS-PROT entry is copyright. It is produced through a collaboration between the Swiss Institute of Bioinformatics and the EMBL outstation -
                                                                                                    -!- FUNCTION: Has an important function as a repair enzyme for proteins that have been inactivated by oxidation. Catalyzes the reversible oxidation-reduction of methionine sulfoxide in proteins to methionine (By similarity).
-!- CATALYTIC ACTIVITY: Protein L-methionine + oxidized thioredoxin = protein L-methionine S-oxide + reduced thioredoxin.
-!- SIMILARITY: Belongs to the msrA Met sulfoxide reductase family.

LSFKWPGFCLFVCFLCPFVLPCHS (in isoform 2).
                                                                                                                                                                                                                 -!- FUNCTION: Transcription factor that binds to the octamer motif (ATTTGCAT'). Activates cytokeratin 10 (K10) gene expression. May serve a regulatory function with respect to epidermal development. Isoform 2 inhibits transactivation by OCT-1.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Name=1; Synonyms=Skn-1a;

-!- TISSUE SPECIFICITY: Expressed in epidermis.
-!- SIMILARITY: Belongs to the POU transcription factor family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  EMBL; 123863; -; NOT ANNOTATED CDS.

Jimenez-Mateco O., Castrillo J.L.;
"PLA-1. a novel human POU transcription factor, regulates the placental lactogen-3 gene expression."
Submitted (CGT-1998) to the EMBL/GenBank/DDBJ databases.
-!- FUNCTION: Transcription factor that binds to the octamer motif ('ATTGGAT'). Regulated the expression of a number of genes such as SPRRZA or placental lactogen.
-!- SUBCELLUAR LOCATION: Nuclear.
-!- TISSUE SPECIFICITY: Specifically expressed in epidermis and

bubmitted (JAN-2000) to the EMBL/GenBank/DBJ databases.

-!- FUNCTION: May function as a transcription factor.

-!- SUBCELLULAR LOCATION: Nuclear (Probable).

-!- SIMILARITY: BELONGS TO THE KRUEPPEL FAMILY OF C2H2-TYPE ZINC-

-!- SIMILARITY: Contains 1 KRAB domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 r protein; Transcription regulation; Homeobox.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                셤
```

RESULT 13 Q8WYA2

```
"Identification of a novel ARNT-like transcription factor, hBMAL2.";
Submitted (MAR-2000) to the EMBL/GenBank/DDBJ databases.
-1- SIMILARITY: BELONGS TO THE BASIC HELIX-LOOP-HELIX (BHLH) FAMILY OF
TRANSCRIPTION FACTORS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     SEQUENCE FROM N.A.
